Class	Implements	Duplicates Allowed	Maintain s Order	Sorted	Allows Nulls	Thread -Safe	Best Use Case
ArrayList	List	✓ Yes	✓ Yes	<mark>≫ No</mark>	✓ Yes (1 null)	<mark>≫</mark> No	Random access, fast read
LinkedList	List, Deque	✓ Yes	Yes	<mark>≫</mark> No	✓ Yes	<mark>≫</mark> No	Frequent insert/delete
Vector	List	✓ Yes	✓ Yes	<mark>≫ No</mark>	✓ Yes	✓ Yes	Legacy synchronize d list
Stack	Vector	✓ Yes	Yes (LIFO)	<mark>≫ No</mark>	Yes	Yes	LIFO operations
HashSet	Set	<b>≫</b> No	<b>X</b> No	<mark>≫ No</mark>	Yes (1 null)	<mark>≫</mark> No	Unique elements, fast lookup
LinkedHashSet	Set	<b>≫</b> No	✓ Yes	<b>≫</b> No	✓ Yes	<b>≫</b> No	Unique with insertion order
TreeSet	NavigableSet	<b>≫</b> No	Yes (Sorted)	✓ Yes (Natural/C )	X No (no nulls)	<mark></mark> № No	Sorted unique elements
HashMap	Мар	Keys: X  Duplicates  Values	<b>X</b> No	<b>≫</b> No	One null key, multipl e null values	_	Key-value store, fast lookup
LinkedHashMap	Мар	✓ Yes	✓ Yes	<b>≫</b> No	✓ Yes	<mark>≫ No</mark>	Maintains insertion order in maps
TreeMap	NavigableMa p	✓ Yes	✓ Yes (Sorted)	✓ Yes	X No (no null keys)	<mark>≫</mark> No	Sorted key- value pairs

.

\_

Class	Implements	Duplicates Allowed	Maintain s Order	Sorted	Allows Nulls	Thread -Safe	Best Use Case
Hashtable	Мар	✓ Yes	<b>X</b> No	<b>X</b> No	<mark>∷ No</mark> (no nulls)	✓ Yes	Legacy synchronize d map
PriorityQueue	Queue	✓ Yes	X No (Heap order)	✓ Yes (Priority)	<mark></mark> № No	<mark></mark> № No	Priority- based processing
ArrayDeque	Deque	✓ Yes	✓ Yes	<b>≫</b> No	<b>≫</b> No	<b>≫</b> No	Fast stack/queue with no capacity restrictions
EnumSet	Set	<b>≫</b> No	Yes (Enum order)	✓ Yes	<b>≫</b> No	<b>≫</b> No	Efficient set for enum types
WeakHashMap	Мар	✓ Yes	<b>X</b> No	<b>X</b> No	✓ Yes	<mark>≫</mark> No	GC-aware map (weak keys)
ConcurrentHashMap	Мар	✓ Yes	<b>X</b> No	<b>≫</b> No	X No null keys	✓ Yes	Thread-safe map without locking
CopyOnWriteArrayLis t	List	✓ Yes	✓ Yes	<b>≫</b> No	✓ Yes	✓ Yes	Thread-safe list, good for read-heavy use

Feature	LinkedHashMap	TreeMap	Hashtable
Allows Duplicate Keys	X No (keys must be unique)	X No (keys must be unique)	X No (keys must be unique)
Allows Duplicate Values	✓ Yes	✓ Yes	✓ Yes
Key Order Maintained	✓ Yes (insertion order)	Yes (sorted order - natural/comparator)	X No (no guaranteed order)
Null Keys Allowed	Yes (only 1 null key)	X No (throws NullPointerException)	✗ No (throws NullPointerException)
Null Values Allowed	✓ Yes (multiple null values)	✓ Yes	✗ No (throws NullPointerException)
Thread-Safe	<b>X</b> No	<b>≫</b> No	Yes (fully synchronized)
Use Case	Maintain key insertion order	Maintain sorted order	Legacy synchronized map

Here's a  ${\color{red} \,}{\color{blue} \,}{$ 

Framework, organized by their respective interfaces (e.g., List, Set, Map, Queue, etc.).

# ✓ 1. List Interface – Ordered Collection (Allows Duplicates)

### **Implementation Class Description**

ArrayList Resizable array, fast random access

LinkedList Doubly linked list, efficient insert/delete

Vector (legacy) Synchronized dynamic array

Stack (extends Vector) Legacy LIFO stack

CopyOnWriteArrayList Thread-safe list (java.util.concurrent)

# 2. Set Interface – No Duplicates

#### **Implementation Class Description**

HashSet Unordered set, backed by HashMap

LinkedHashSet Maintains insertion order

TreeSet Sorted set (Red-Black tree)

EnumSet High-performance set for enums

CopyOnWriteArraySet Thread-safe set (java.util.concurrent)

# ✓ 3. Queue & Deque Interfaces – FIFO, LIFO, and Priority

### Implementation Class Description

PriorityQueue Elements ordered by priority

## Implementation Class Description

ArrayDeque Resizable double-ended queue

LinkedList Implements both Queue and Deque

ConcurrentLinkedQueue Thread-safe queue (non-blocking)

LinkedBlockingQueue Blocking queue (java.util.concurrent)

ArrayBlockingQueue Bounded blocking queue

PriorityBlockingQueue Thread-safe priority queue

DelayQueue Elements become available after delay

SynchronousQueue For thread handoff, no internal storage

LinkedTransferQueue High-performance concurrent queue

## 4. Map Interface – Key-Value Pairs

#### **Implementation Class Description**

HashMap Fast lookup via hash table

LinkedHashMap Maintains insertion order

TreeMap Sorted map (Red-Black tree)

Hashtable (legacy) Synchronized map

WeakHashMap Keys are weakly referenced

IdentityHashMap Compares keys by reference (==)

EnumMap Efficient map for enum keys

ConcurrentHashMap Thread-safe, high concurrency

## 5. Other Specialized Implementations

Class Implements/Supports

Properties Subclass of Hashtable, used for configs

Collections (Utility) Static utility methods for collections

Arrays (Utility) Static methods for arrays
